A FIELD GUIDE FROM PERSEVERANT DIGITAL · FOR ESTATE SECURITY

The 5-Minute Follow-Up System

Test how fast your business really answers new inquiries, then set up follow-up that replies in minutes, sounds human, and keeps going until each person books or says no.

THE SHORT ANSWER · 60 WORDS

REVIEWED OCTOBER 15, 2026

New leads should hear from you within minutes, not hours. Harvard Business Review research from 2011 found firms that contacted web leads within an hour were nearly seven times as likely to qualify them. The fix is a simple system: an instant personal reply, a fast call attempt, a two-week follow-up cadence, consent-safe texting, and reminders that protect the appointment.

Why does response speed matter so much?

Speed decides whether you get a conversation at all. People who reach out often contact more than one business, and their attention fades fast.

In March 2011, Harvard Business Review published an audit of 2,241 US companies. Only 37% responded to a web lead within an hour, and 23% never responded. In a separate data set of 1.25 million leads, firms that made contact within an hour were nearly seven times as likely to qualify the lead as firms that waited longer.

You don’t need more tools. You need your real numbers and a few reliable habits.

What this looks like for estate security firms

Discretion comes first, but speed still matters. The person reaching out may have just had a scare or a public moment. They want to know quickly that a serious person has heard them.

The stakes per inquiry are high. ASIS International reported in April 2025 that a professional threat assessment typically costs $25,000 to $50,000.

Use automation only to confirm the inquiry arrived and set a call time. Never put addresses, schedules, system details or concerns in a text or email. Treat referral partners (attorneys, family office staff, architects, builders) as their own route with their own owner, so a warm introduction never waits behind a web form.

The owner pain: principals are with clients, and the inquiry that needed a same-day call waits until the weekend.

Step 1: How fast does your business really respond?

Test yourself first. Ask a friend to contact your business five ways over one week, using a name your team won't recognize.

Test	Time to first reply	Who replied (person, bot, nobody)	Asked a question?	Offered a specific time?
Website form, business hours				
Phone call after hours				
Email to your main address				
Social DM				
Your choice (chat, directory listing)				

Score each test, up to 6 points:

- [ ] Reply under 5 minutes: 3. Under 1 hour: 2. Same day: 1. Later or never: 0.

- [ ] A real person, or an auto-reply that said a person would follow up: 1.
- [ ] Asked one useful question: 1.
- [ ] Offered a specific time or booking link: 1.

Your score: ____ out of 30. Fix the lowest channel first. It is usually the one nobody owns.

Step 2: What should happen in the first five minutes?

Every inquiry gets a personal reply, a call attempt and a named owner within five minutes. Automation handles the reply and routing. A person makes the call.

- [ ] **Instant text (with consent) and email** from a named person, saying what happens next. Add your number, hours and a booking link to the email.
- [ ] **Call attempt within five minutes.** The right person gets an alert. Unclaimed after five minutes, it goes to a backup.
- [ ] **Log every attempt** on the contact record, so nobody double-calls or drops the ball.

If the lead is...	It goes to...	Backup after 5 minutes
New, business hours		
New, after hours		
A specific service or location		
A referral partner		

After hours, pick one plan: an auto-reply that names a person and a time ("Maria will call you at 8:30 tomorrow"), an on-call person for clearly defined urgent cases, or a booking link so people can choose a time tonight. A specific promise beats "we'll be in touch soon." Keep it.

Step 3: How do you follow up with leads who go quiet?

Keep going for two weeks, mix channels, and stop the moment they reply, book or opt out. Quiet usually means busy, not uninterested.

Day	Channel	Purpose
0 (first 5 min)	Text + email + call	Confirm and connect
0 (evening)	Text	“We tried you earlier. What time tomorrow works?”
1	Call + voicemail	Name, reason, callback number
2	Email	Answer the question people in their situation ask most
4	Text	“Would a 15-minute call Thursday or Friday be easier?”
7	Call	Second voicemail, different angle
10	Email	What the first appointment looks like, step by step
14	Text or email	Respectful close (template 2)

Write like a person with a real calendar. No exclamation marks, no “just checking in.”

Template 1: first reply

> Hi [First name], this is [Your name] at [Business]. Thanks for reaching out about [topic]. We’ll call you in the next few minutes. If now’s bad, reply with a better time and we’ll work around you.

Template 2: the respectful close

> Hi [First name], we haven’t been able to reach you, so we’ll stop following up for now. If you’d still like help with [topic], reply here or call us at [number]. No pressure either way.

The close often gets the most replies. It tells the truth and makes answering easy.

For estate security, leave [topic] as “your inquiry,” have template 1 only confirm receipt and offer a call time, and move the day 2 and day 10 emails to the phone.

Step 4: Is it legal to text leads?

Usually yes, with the right consent and fast opt-outs. This is a factual summary, not legal advice. Have counsel review your forms.

Under the TCPA, prior express written consent is still required for autodialed or prerecorded marketing calls and texts. Since April 11, 2025, people can revoke consent by any reasonable means, such as replying STOP, and opt-outs must be honored within 10 business days. The FCC's "revoke-all" provision is delayed to January 31, 2027 (Burr & Forman), and the separate one-to-one consent rule was vacated by the Eleventh Circuit on January 24, 2025 (Kelley Drye). Under the FTC's CAN-SPAM guide, marketing email, B2B included, needs accurate headers, a postal address and an opt-out honored within 10 business days.

- [ ] An unchecked consent box, separate from submitting the form, with wording counsel has approved.
- [ ] The consent record (date, time, wording, source) saves to the contact.
- [ ] STOP and similar replies, plus opt-outs by phone or email, stop all marketing messages.
- [ ] Quiet hours set for your states, confirmed with counsel.
- [ ] Every marketing email has your postal address and a working unsubscribe.

Step 5: How do you protect the appointment and keep "not yet" warm?

Confirm right away, remind twice, and make rescheduling easier than skipping. Then give anyone who isn't ready something useful once a month.

When	Channel	Message goal
Right after booking	Text + email	Date, time, place or link, and who they'll meet
24 hours before	Text	Reply C to confirm or R to reschedule (R goes to a person)
2 hours before	Text	Address, parking or link
15 minutes after a no-show	Text + call	"We missed you. Want to pick a new time?"

After a no-show or a “not yet,” move the person to a monthly note: one helpful idea, one way to reach a person, no hard sell. Alert a person when they reply, open several emails in a short window, or reach the timeline they gave you (“call me in the spring”).

Reminders carry only the time and the name of the person they’ll meet. No address, no topic.

Step 6: What should you measure every week?

Three numbers: median time to first human reply, booked rate (booked ÷ new leads) and show rate (kept ÷ booked). Also count leads with no reply after 24 hours.

Example numbers, not benchmarks: 40 leads, 14 booked, 10 kept is a 35% booked rate and a 71% show rate. If a faster first reply moves bookings to 18 of 40, that is four more conversations a week from the same ad spend.

Each week, ask whoever owns follow-up one question: which lead did we lose, and why?

Where do most owners get stuck?

> **Making it fire reliably across tools.** Forms, phones, calendars and the CRM often come from different vendors. One broken connection means leads silently stop getting replies, and nobody notices for weeks.

> **Routing to the right human fast.** Backups, after-hours rules and service-specific owners get complicated. Most systems route correctly on day one and drift as staff change.

> **Automating without exposing anything.** Deciding exactly what a system may store and send, and what must stay off it, takes judgment most off-the-shelf tools don’t build in.

If you’d like help with any of these, book a 25-minute exploration call using the short form at the end of this guide.
